

Job Posting – Product Manager

Modulim is a venture backed medical device company that is solving the problem of preventable yet devastating limb complications that occur due to diabetes, peripheral arterial disease, and kidney disease. Originally spun out of the Beckman Laser Institute at the University of California, Irvine, our team consists of some of the leading experts in biomedical photonics, digital health, and medical devices. If you are looking for an opportunity to be part of a dynamic environment and a growing team that is changing healthcare - this is the place for you.

The Opportunity:

- Reports to Chief Product Officer
- Works on the Product team as the key interface between Marketing, R&D, Clinical, Quality, Regulatory, Engineering, and Operations teams to obtain alignment on product requirements, definition, implementation, and verification, from the synthesis phase through to release and post-market surveillance. Specifically:
 - Works with the Marketing team to gather and translate requirements and “Voice of the customer” from Sales and Clinical teams, medical advisory/KOL boards, and marketing requirements documents
 - Works with the Engineering team to create design input requirements and product acceptance criteria
 - Works with the Quality/Operations team to gather post-market feedback on product utilization and usability
- Plans, manages, and drives on-time and on-budget development of the company’s products
- Communicates with stakeholders, obtains stakeholder engagement to ensure the end products or processes will solve business problems
- Understands, researches, and follows technical trends in the industry and in general. Assesses emerging products and companies to measure their potential value or threat to the company and its products, as well as make recommendations on which new technologies to invest in or leverage
- Coordinates and aligns internal teams on product priorities
- Manages and communicates product release timelines to organization
- Builds tools and processes to streamline feedback and product improvement priorities
- Defines success criteria for testing and product acceptance

The Qualifications:

- Advanced (MS) degree or equivalent experience in engineering, software development, or computer science; experience with medical devices or healthcare technologies preferred
- 5+ years or equivalent experience in conducting/managing product development
- Experience with data management and documentation tools (i.e. DVCS, Excel, Word)
- Experience with requirements management/traceability practices and tools
- Experience and knowledge of medical device industry practices, techniques, and standards preferred
- Familiarity with FDA Design Controls and ISO 9001, ISO 13485, and IEC 62304 preferred
- Must have strong verbal and written communication skills
- Ability to communicate effectively with internal teams, including downstream (sales, marketing and clinical) and upstream (developers, engineers, quality, and operations) functions
- Strong project management skills required; PMP certification a plus
- Motivated and able to handle multiple projects within a cross-functional team and matrix structure

The Benefits:

- Generous paid-time-off policy & employer contribution toward medical insurance
- Employee-paid dental, vision and a variety of supplemental insurance policies available
- Employer-paid \$10,000 Basic Life Insurance
- 401(k) Plan with matching benefits
- Stock options

Location

- Irvine, California (remote work considered)
